

Advantage Healthcare Community Healthcare services

At Advantage Healthcare we work extensively with CCGs, NHS Trusts and pharmaceutical suppliers to deliver high quality care at home services.

- An established skilled and supervised nurse and health care support worker workforce
- Our nurses and health care support workers deliver over 20,000 episodes of care every month
- A mobile enabled workforce available across England, Scotland and Wales
- We prioritise high quality, safe care through robust governance and on-going supervision and training
- Partnership working with pharmaceutical companies and NHS Trusts to deliver innovative solutions to community care

Thanks to our extensive workforce, Advantage Healthcare works in partnerships with pharmaceutical companies and NHS centres of expertise to deliver life-saving medication and procedures in the patient's home. This reduces the need for hospital admissions, the burden on NHS staff time and significantly improves the experience for the patient.

Talk to us about the growth of our renal dialysis and IV home therapies services where we have achieved 20% increase in activity for our client, with around 50% growth seen within the nurse delivered IV services.

In another initiative Advantage Healthcare nurses step in after the patient is discharged from the one hospital in the UK that supports these patients with this specialist requirement. Through our pool of nationwide nurses, we supervise home injections which has reduced the need for re-admissions among the cohort of patients for this niche condition.
